ACKNOWLEDGMENTS

Coding of Offender History Information

- Classification Specialists (Bureau of Research)
Jim Bates
Reeda Boyd
Ronnie Easter
Cindy Gonzalez
Vicky Muncy

Preparing/gathering PSIs/OBIs - Adult Parole Authority - Field Services Section

- Special thanks to Harry Hageman, Deputy Director, Sharon Haines, Former Superintendent, and Sara Simila, Superintendent, for authorizing APA work on the study.
- For coordinating investigation preparation/submission:

Parole Program Specialists (Case Analysts)

Laura Kirby, Cincinnati Region
Cliff Labyk, Cleveland Region/Central Office
Margie Reindel, Lima Region
Steve Vargo, Chillicothe Region
Doug Parsons/Ernest Winston, Cleveland Region
John Renner, Akron Region
Lazarus Todd, Mansfield Region

Sue Damron, Deputy Superintendent
Kathy Butler, Deputy Superintendent
Michael Jackson, Deputy Superintendent
Danny Turek, Deputy Superintendent

- For preparing/gathering PSIs/OBIs:

All Unit Supervisors and Parole and Probation Officers who completed offender background and pre-sentence investigations, the support staff who typed up the finished reports, as well as the support staff who assisted with processing of the reports.

Assistance at DRC Reception Centers

- All Classification staff who collected demographic and social characteristics information on short-term offenders.

EXECUTIVE SUMMARY

Social and Demographic Characteristics

- Of the 3,135 offenders included in the study, 88.4% were male and 11.6% were female. [Table 1]
- The racial composition of the intake sample was: 51.3% African American, 48.5% Caucasian, 0.1% American Native, and 0.2% Other. [Table 2]
- The seven counties with the greatest numbers of offenders committed to Ohio prisons during the intake study period were: Cuyahoga (N=765; 24.4%), Hamilton (N=336; 10.7%), Franklin (N=254; 8.1%), Summit (N=171; 5.5%), Montgomery (N=156; 5.0%), Stark (N=108; 3.4%) and Lucas (N=103; 3.3%). [Table 3]
- The average age of offenders in the intake study was 31.6 years and the median age was 29. Males had an average age of 31.3 and a median age of 29. Females had an average age of 33.6 and a median age of 29. [Table 4]
- At the time of arrest (for the current most serious commitment offense), roughly two-thirds (66.7%) of the offenders were single (never married), 12.1% were married and 21.2% were separated, widowed, or divorced. Men were more likely to have never been married (68.2%) than women (54.7%). [Table 5]
- At the time of arrest, 46.8% of the offenders were unemployed; 34.0% were employed full-time. Males were more likely to have been employed full time (34.9%) than women (26.8%). The possibility that more women were engaged in care for their children as a vocation complicates this comparison. [Table 6]
- At the time of arrest, the educational attainment of the males was as follows: 6.4% had a grade school education or less, 39.8% had some high school, 39.0% were high school graduates or the equivalent but had not attended college, and 14.8% had some college training. The respective education rates for females were 10.6%, 35.0%, 34.7% and 19.7%. [Table 7]
- The data collected from self admissions, social and criminal history records indicate that the female inmates in the sample had a much higher percentage of the following than their male counterparts:
 - ❖ Physical abuse as a child or adolescent (female = 25.6%; male = 10.5%); [Table 9]
 - ❖ Sexual abuse as a child or adolescent (female = 31.9%; male = 5.3%); [Table 10] and
 - ❖ Mental health problems (female = 46.8%; male = 25.8%). [Table 11]
- In regards to the prevalence of inmates involved in recent drug abuse, male and female offenders had similar rates (female = 77.5%; male = 78.5%).* [Table 12] Males were slightly more likely than females to have had a history of drug abuse (female = 82.1%; male = 84.8%) [Table 13] and significantly more likely to have had recent alcohol abuse (female = 43.6%; male = 53.3%) [Table 14] and a history of alcohol abuse (female = 60.7%; male =

* Recent drug or alcohol abuse is abuse that occurred within the 6-month period prior to arrest for the current commitment offense. A history of drug abuse is abuse that occurred more than 6 months prior to that arrest date.

65.7%). [Table 15] The likelihood of having completed a substance abuse treatment program was similar for male and female offenders (female = 29.3%; male = 29.7%). [Table 16]

Current Most Serious Commitment Offense

- About a third of the males (32.2%) were incarcerated for committing a crime against persons (including sex offenses) as their most serious offense, with almost another third (30.2%) for committing a drug offense. Approximately one-third (33.5%) of the females were incarcerated for committing a drug offense as their most serious offense, while one-fifth were incarcerated for a miscellaneous property offense (20.9%) and just over one-fifth (21.7%) for committing crimes against persons (including sex offenses). [Table 19]
- The five offenses (most serious commitment offense) for which the male and female offenders in the sample were most often committed were: [Table 19]

<u>Males</u>		<u>Females</u>	
Drug Abuse/Possession	15.6%	Drug Abuse/Possession	20.6%
Drug Trafficking	12.6%	Theft	12.6%
Theft	7.0%	Drug Trafficking	8.0%
Burglary	7.0%	Forgery	7.4%
Receiving Stolen Property	5.8%	Burglary	5.2%

- Most offenders (97.6 %) pled guilty to charges (female = 99.2%; male = 97.4%). [Table 21]
- Three-fifths (63.0%) of the males and nearly three-fourths (72.0%) of the females in the study were incarcerated on a determinate sentence of between 6-12 months for the most serious conviction offense. [Table 23]
- All the offenders in this sample were entering prison for a new felony conviction and commitment from a county Court of Common Pleas. However, some were on supervision when they committed the actions for which they were sent to prison. Roughly two-fifths of the males (42.2%) and over half of the females (51.4%) in the study were incarcerated on either a technical or new crime violation of felony probation or a new crime violation of parole. [Table 26]
- Weapons were involved, in some manner, in the conviction offense in 25.7% of the cases.* [Table 28]
- Close to half (49.3%) of the offenders were under the influence of drugs or alcohol at the time of at least one of the instant conviction offenses (female = 57.1%; male = 48.3%). [Table 30]

* “involved” includes situations where the offender feigned having a weapon or where a weapon was present but not used in the commitment offense, as well as situations in which a weapon was used to injure or kill.

Criminal History

- Men were more likely than women to have had at least one prior prison incarceration (male = 51.5%; female = 35.9%) [Table 61], and at least one prior jail incarceration (male = 58.0%; female = 51.4%); [Table 54]
- The male offenders in the sample were more likely than females to have at least one prior adult supervision term (female = 71.8%; male = 77.4%) [Table 62], but women were slightly more likely to have at least one prior revocation of adult supervision (female = 60.2%; male = 54.9%). [Table 63]
- Three-fourths (75.0%) of the offenders had at least one prior adult conviction for a non-violent misdemeanor (female = 73.5%; male = 75.2%). [Table 50] Nearly one third (29.6%) of the offenders had at least one prior adult conviction for a violent misdemeanor (female = 16.6%; male = 31.3%). [Table 52]
- More than six in ten offenders (62.5%) had at least one prior adult felony conviction (female = 50.6%; male = 64.1%). [Table 55]
- Approximately one-fourth (25.2%) of the offenders had at least one prior adult conviction for a violent (non-sex) felony (female = 12.7%; male = 26.8%). [Table 56]
- About one-fifth (22.4%) of the offenders had at least one prior adult felony conviction for drug use or possession (female = 21.3%; male = 22.5%). [Table 58]
- Roughly one in six offenders (15.6%) had at least one prior adult felony conviction for drug sale or trafficking (female = 9.7%; male = 16.3%). [Table 59]

Assessment of SB2 Impact

- Only 0.6% of the inmates admitted during the Intake 2003 study period were exclusively under the pre-Senate Bill 2 law (98.8% were exclusively Senate Bill 2).
- The percentage of inmates admitted who were truly non-violent (TNV) was 33.2% in the 2003 Intake Study, continuing the rather steady decline since SB2. In the 1996 Intake Study (which included only Pre-Senate Bill 2 inmates), the percentage of truly non-violent inmates was 44.4%. This figure declined to roughly 40 percent in the 1997 and 1998 Intake Studies, to 38.6% in the 2000 Intake Study, to 35.8% in the 2001 Intake Study and again in the 2002 Intake Study to 33.9%. A TNV offender is one who has **no** violent current conviction or indictment offense, **no** prior felony conviction for a violent or sex offense, **no** gun time, and **no** weapon involvement in the current offense.

- In 2003, the percentage of TNV offenders who were supervision (parole or probation) violators increased to 53.6%. This nearly matches the record high of 54% in 1998. The 2003 figure was a slight increase over the same figure of 53.3% in 2002. See Table A below, titled “TNV Admissions”, to follow the patterns since 1996.

Table A-% Supervision Violators

TNV Admissions	Intake Study Year						
	1996	1997	1998	2000	2001	2002	2003
% Supervision Violators	36	50	54	49.4	45.8	53.3	53.6

- The percentage of all admissions who were probation violators (Table B, below) has generally followed a similar pattern as the percent of TNV offenders who were supervision violators. That group rose from approximately 30% in the 1996 Intake Study to 35% in the 1997 study and 39% in the 1998 study and then declined to roughly 37% in the 2000 study and 34% in the 2001 study. There was a slight increase in 2002 to 35.6% but the rate in the 2003 Intake Study dropped to 32.5%.

Table B-% Probation Violators

Intake Sample Population	Intake Study Year						
	1996	1997	1998	2000	2001	2002	2003
% Probation Violators	30	35	39	36.6	33.6	35.6	32.5

- The percentage of new admissions who had committed a new crime while on parole or post release control rose yet again in the 2003 Intake Study to 10.7%. This figure has risen in each intake study since the inception of SB2. The rate in the 2003 Intake Study is six times what it was in the 1996 study. Much of this increase is explained by an increase in the number of offenders assigned to supervision after prison. That number was 3.2 times as large in May 2003 as in May 1996.
- All of these figures suggest that SB2, in terms of resulting in an intake population that contains a higher proportion of violent/more serious offenders and a smaller proportion of truly non-violent offenders, continues to affect the composition of the prison population to some degree. The smaller proportion of TNV offenders admitted into prison in 2003 suggests progress in the intended direction.

INTRODUCTION

The purpose of this report is to present a basic profile of newly committed inmates entering the Ohio Department of Rehabilitation and Correction (DRC) prison system during 2003. The profile of Intake 2003 inmates includes the following information: (1) demographic and social characteristics of the inmates; (2) characteristics of the current commitment offense, and; (3) the inmate's prior criminal history. These tables may be used to compare the characteristics of inmates entering the prison system across the years for which similar data have been collected (1985, 1992, 1996, 1997, 1998, 2000, 2001 and 2002).

Methodology

In general, data for intake studies are collected on all inmates who enter the DRC prison system during a two-month period. Information is obtained from four sources:

- (1) Interviews with inmates at reception centers;
- (2) Written investigations;
- (3) Microfiche from the records department to supplement partial or incomplete investigation reports, and;
- (4) The new Onbase information system, with offender background reports available in digitized form.

The interviews with the inmates, conducted by DRC classification specialists, take place at DRC's three reception centers housed at Lorain Correctional Institution, Ohio Reformatory for Women, and the Correctional Reception Center. The emphasis is on social history information not consistently available in offender files.

The DRC would like to prepare a full investigation (either a PSI – Pre-Sentence Investigation – for the sentencing judge or an OBI – Offender Background Investigation – a similar document prepared with a focus on DRC information needs) for each new inmate admitted during 2003. Unfortunately, resource and administrative demands prevent that on a routine basis. Inmates who will be serving sentences less than 90 days frequently enter the system without such a report. Also, the investigations for offenders expected to spend longer than three but less than 12 months are reduced in scope. During the two-month study period, however, APA staff are requested to write investigation reports for all offenders entering Ohio's prisons in order to obtain an accurate representation of all inmates entering the prisons during the intake study period (and, it is hoped, the entire year).

The investigation reports primarily consist of pre-sentence investigation and offender background information reports produced by Adult Parole Authority (APA) staff. Most reports are written by APA officers based in the jurisdiction where the offender committed his/her offense(s). The rest are prepared by the probation departments in the committing counties. The report is supplemented, if appropriate, with information on types and amounts of drugs and the value of the theft crimes. Central Office classification specialists then read through each investigation report, collect and code the information not obtained from the intake interview for the Intake Study Report.

With such a large data collection effort, it is inevitable that some of the necessary information on offenders will be missing from the investigation reports. When information is missing, classification specialists must obtain microfiche records (or, very recently, copies of

documents available online in digitized form) on inmates from the records bureau at Central Office, read through the available information and attempt to retrieve the missing information.

Data was collected on all inmates who entered the DRC prison system between May 21, 2003 and July 20, 2003. The resulting data set contains information on a sample of 3,135 newly committed inmates received by DRC during this two-month period.

Caveats Regarding the Data

There are several limitations to the data of which the reader should be aware when assessing this information. First, the reader should bear in mind that the characteristics of the offense apply to the most serious and second most serious conviction offenses only. This results in the need for caution when trying to establish the proportion of offenders serving time for particular offenses. For example, an offender may have been convicted for felonious assault and domestic violence. The proportion of offenders currently entering prison for domestic violence will be underestimated when looking only at the proportion of offenders committed for domestic violence as the most serious offense.

A more accurate representation may be found by also considering offenders for whom domestic violence was the second most serious offense; however, we are not able to identify the number of offenders committed for domestic violence as a third or fourth most serious offense. While we believe that considering the most and second most serious offenses captures important offense characteristics for the majority of offenders entering prison for any given offense, estimates using this data base must be considered conservative estimates. Similar precautions should be taken when estimating the various proportions of victim characteristics and other variables associated with particular offenses.¹ The data base also does not contain information on the number of counts of offenses upon which the inmate was sentenced.

A second concern regards juvenile offense data. The availability of juvenile records continues to be problematic. Many county juvenile courts have a policy of refusing access to juvenile records; some will permit access only with a signed waiver from the inmate. Other juvenile courts routinely destroy juvenile records for individuals born before a specific date. As a result, the completeness of the juvenile record information remains questionable. Great care should be taken when attempting to draw conclusions from juvenile criminal history information contained in the intake databases.

The third concern deals with several limitations of adult criminal histories in general. The reader should be aware that the intake data reports only prior adult convictions, not arrests. No conclusions can be drawn regarding arrests from the data. There is also no information recorded on indictment charges nor plea bargaining for prior convictions. For example, it is possible that an inmate was at some previous time charged with a violent offense but agreed to plead guilty to a lesser, non-violent offense. As a result, there may be a number of individuals in the intake data base who are identified as having no prior convictions for violent offenses, but they actually do have a history of violent behavior.

¹ For inquiries which require a greater degree of specificity, please contact the Bureau of Research for additional analysis.

Representativeness of the Sample

It is important to note how representative this cohort of inmates is when compared to the inmates being admitted throughout the year. Consequently, the Intake 2003 sample should be comparable to inmates admitted during CY 2003. The information below, taken from a nearly final draft of the CY 2003 Commitment Report, illustrates that the Intake 2003 sample closely resembles the year's intake on several basic features. The only noticeable differences are slightly higher proportions in the Intake sample from Cuyahoga County and among African-Americans. (The two variations are probably related.) The differences are small, and seem unlikely to affect any major generalization.

	INTAKE 2003 %	COMM. CY 2003 %
<u>Sex</u>		
Female	11.6	11.5
Male	88.4	88.5
<u>Race</u>		
African American	51.3	49.6
Caucasian	48.5	48.0
<u>Counties of Commitment</u>		
Cuyahoga	24.4	21.8
Hamilton	10.7	10.9
Franklin	8.1	8.9
Summit	5.5	5.8
<u>Type of Offense</u>		
Crimes Against Persons	24.5	24.5
Sex Offenses	6.5	6.5
Burglary Offenses	7.5	8.1
Property Offenses	16.8	16.0
Drug Offenses	30.6	30.3
Motor Vehicle Offenses	1.2	1.2
Fraud Offenses	3.8	3.4
Weapons Offenses	2.2	2.7
Justice and Public Administration	6.9	7.3
Other Offenses	0.1	0.1
<u>Mean Age in Years</u>		
Female	33.6	33.6
Male	31.3	31.4

This comparison suggests strongly that the Intake 2003 sample is representative of all inmates admitted into ODRC's prisons in 2003.

Structure of the Report

This report is organized into three sections. The first section presents the demographic and social characteristics of the 2003 intake sample. The second section provides information on the characteristics of the most serious current commitment offense. Information regarding the offender's prior criminal history is presented in the third section.

In reviewing the tables, please be aware that due to rounding percentages may not total exactly to 100%. This condition may be true for any table in this report.
