CENSUS REPORT: JULY 1, 2007

This report provides a detailed description of the Ohio Adult Parole Authority (APA) active supervision population on July 1, 2007. The report contains descriptive data for offense and supervision variations cross-tabulated by offender's sex, race and age. Also, it contains cross tabulations of APA region & unit locale by offense and supervision types. This is the seventh APA census since 1996.

Go to www.drc.state.oh.us/web/Reports/reports25.asp to access past census reports.

Data Source

The data contained in this report were downloaded from an extract of the Community Correction Information System (CCIS). The reported population count of 34,202 coincides closely with the month-end total of 34,188 cases reported in the June 2007 APA agency report. The supervision population described in the report is a "snapshot" of the cases flagged as active on July 1, 2007, excluding cases designated as pending. Those flagged active cases include outgoing interstate compact cases deemed active under CCIS business rules. It also includes a smaller number of inactive county probation and community control cases not yet formally designated as closed in CCIS.

Key Information

During the fiscal year ending July 1, 2007, the total supervision population under APA grew by 2.3 percent from the year ago census contrasting with a 4.7 percent drop in population between 7/1/2005 and 7/1/2006. [See the populations comparison from 2004-2007 in Table 11]. The sex and race elements of the population have remained generally stable across the 2004-2007 populations at approximately 85% male and 15% female, and 63% white and 37% non-white.

Regarding offense type, crimes against persons declined two percentage-points from the 7/1/06 census from 30.9 percent to 28.9 percent. Likewise, burglary dropped by 1.5 percentage-points. Drug and property crimes slightly increased. Sex offenses remained unchanged from the year ago period. Also during FY'07, the parole subpopulation declined by nearly three percentage-points while the post-release control subpopulation increased by 1.5 percentage-points. In addition, offenders under the Basic Medium level of supervision grew by more than 8 percentage-points, accounting in 2007 for three-quarters of the total supervision population. Although Monitored cases account for a small portion of the total supervision population (7.9%), the number of offenders under monitored supervision grew by 1.5 points from a year ago and 4.5 points since 2004 indicating steady growth. Both Basic High and Basic Low supervision levels declined by five percentage-points each from the year earlier census.

The mean age of the total population under supervision has been calculated differently for this census. The mean age was re-calculated using the *date of the census- July 1, 2007* rather than the start of supervision date as has been done in previous reports. * When re-calculated, the average age of the 2004-07 period was 35 and remained unchanged through 2004-07. Using the new comparisons, the 50 and over age subpopulation grew by 0.7 percentage-points from 7/1/06.

[* With regard to *age*, the information in Table 11 for 2004-06 is new, not repeated from the previous APA census reports]

Organization of Report

The report presents summary data on sex, age, race, offense type, supervision type, supervision level, APA region & unit locale, and Sentencing County. Tables 1-3 provide aggregate data for all APA supervision units combined. Table 1 summarizes age, race, offense, release type, and supervision level cross-tabulated by offender's sex. Tables 2 and 3 cross-tabulate release type with sex, race, age, offense, and supervision level. In Tables 4-9, sex, race, age, offense, release type and supervision level are broken down by APA region & unit locale. Throughout the detailed region and unit tables, there is a category near the bottom of each table called "other". This category includes outgoing interstate compact cases, inactive, violators at large, detainer, county and residential/halfway house cases.

It should be noted that in the last of these region and unit locale tables (Table 9), the "other" category does not include the residential/halfway house cases. Because Table 9 looks at the breakdown of supervision level by region and unit locale, and "residential" supervision is one of the supervision levels, we decided to include the residential category so that the reader can see how these cases are apportioned by region. Since all of these residential cases are under transitional control, we included the transitional control (TRC) category for each region following the listing of all of the units. Table 10 illustrates the rates at which supervised offenders reside in their sentencing counties for the parole and post-release control supervision subpopulations. Finally, table 11 provides a comparison of the 2004, 2005, 2006 and 2007 populations for the demographic, offense, and supervision variables.

The key findings for the July 1, 2007, Ohio APA census are outlined below in the Executive Summary.

Ohio Counties and County Seats

- Cincinnati Region
 - Cleveland Region
 - Columbus Region
 - Chillicothe Region
 - Akron Region
 - Lima Region
 - Mansfield Region

REV. 10/00

APA CENSUS EXECUTIVE SUMMARY (JULY 1, 2007)

- The total supervision population numbered 34,202; this was a 2.3% increase from the year ago census. The 5,248 females under supervision constituted 14% of the total population and represented 8.7 percent growth in females from a year ago.
- The youngest offender was age 11 (confirmed) and the eldest was 92, giving a range of 81 years. Their average age was 35 and the median age was 34 on the day of the census. Just 16% of the supervision population were aged 24 or under, while 35% were 40 or older.
- Overall, more than 3 out of 5 in the supervision population were white and nearly 2 out of 5 were nonwhite. Seven of every ten women under supervision were white, compared to six of every ten men.
- Over one-quarter (29%) of the supervision population had committed a crime against a person (excluding sex offenses) as the most serious commitment offense. If sex offenses are counted, more than two out of five (44%) in the supervision population had a crime against a person as their most serious commitment offense.
- Post-Release Control (PRC) is the modal form of supervision; nearly two out of five (39%) of those under supervision were on PRC. Nearly three out of ten supervisees (29%) were on Community Control, and just 11% were on Parole, nearly three percentage points less than last year.
- The most serious offense type patterns were significantly different for males and females. Whereas nearly one-half (48%) of the males under supervision had committed a crime against a person (including sex offenses), just one-fifth (20%) of the females had committed a crime against a person (including sex offenses) as their most serious commitment offense. In contrast, females had 27% with a property offense and 26% with a drug offense as their most serious commitment offense.
- The distributions of release types were strikingly different between males and females, with half (50%) of all female supervisees under Community Control. Over 3-out-of-5 (63%) of the males were on Parole or another post-prison type of release, while every 7-out-of-10 females were on a probationary type of release. The top three release types for males were Post-Release Control (42%), Community Control (25%) and Parole (13%). In contrast, the top three release types for females were Community Control (50%), Post-Release Control (19%), and Compact Probation (11%).

- There have been changes in supervision levels between 2006 and 2007. Three-quarters (75%) of the APA population were on Basic Medium supervision compared to 66% a year earlier, a 9 percentage-point increase. Also, just 3% of the population was on Basic Low compared to 8% a year ago. Similarly, 1% was on Basic High supervision compared to 6% a year ago. The proportion of males and females on Basic Medium supervision were comparable a year ago with 65% and 69%, respectively. In comparison, for this census, 80% of the females versus 73% of the males were on Basic Medium supervision. In addition, the proportion of females on Basic Low supervision was twice that for males in the period a year ago, 15% and 7%, respectively. In comparison, just 5% of the females and 3% of the males were on Basic Low. Similarly, the percentage of males on Basic High supervision was 7% and just 2% of the females in the year ago census. Currently, just 1% of the males and a scant 0.4% of the females were on Basic High in this census. It should be noted a change in supervision policy took effect during FY2007 and generated most of these shifts in supervision level.
- With respect to release type by sex, it's evident that the further the stage into the penalty system, the greater the proportion of males, and conversely, the smaller the proportion of females. Females comprised 41% of those released to Treatment in Lieu, 26% of those on Community Control, 26% of those on Compact Probation, 18% of those on Probation, and 18% of those on Judicial Release. They made up only 7% of those on Transitional Control, 8% of those on Post-Release Control and 3% of those on Parole.
- There is a similar situation when looking at release type by race, in that the further the stage into the penalty system, the greater the proportion of nonwhites, and conversely, the smaller the proportion of whites. The release type with the largest proportion of nonwhites was Parole (58%), followed by Transitional Control (52%), Post-Release Control and Compact Parole (with 45% each), Shock Probation (42%), Compact Probation (29%), Probation (24%), Community Control (24%), Judicial Release (20%) and Treatment in Lieu (11%). Most of the APA's probation supervision is in the small rural (and mostly white) counties, providing a partial explanation of the race patterns.
- Those offenders on Parole had the highest average age (44) among the release types. Sixty-six percent of those on Parole were age 40 or older, while only 2% were under 30. By contrast, offenders on Post-Release Control had an average age of 34, with 29% aged 40 or older and 42% under 30.
- Generally, pre-prison offenders (e.g., Community Control, Compact Probation, Probation or Treatment in Lieu) had younger offenders. Offenders of those release types had an average age of 35, with 32% aged 40 or older and nearly two out of five (39%) under 30. Offenders on Judicial Release were also younger, with a mean age of 34, over one-quarter (29%) aged 40 or older and over two out of five (42%) under 30.

- Three-out-of-four in-state offenders (75%) under parole or post-release control supervision on July 1, 2007, were living in the same county from which they were sentenced. Generally, the more rural regions and counties were below the statewide rate. Chillicothe and Mansfield, largely rural regions, had rates of 60% and 61%, respectively. The region & county with the highest rate was Cuyahoga; 91% of the 3,380 Parole/PRC offenders committed from the county were living there on July 1, 2007.

Table 1: Characteristics of Total Supervision Population, July 1, 2007

* Includes offenses against public peace, justice, and public administration; conspiracy, complicity and attempt.

** Offenders released to a halfway house under transitional control (TRC) release.

*** Prisoner has an approved placement but has not yet been released from incarceration. Upon release prisoner receives a supervision level; they are "pending" cases until that happens.

**** APA staffers no longer supervise Transitional Control (TRC) cases. The Bureau of Community Sanctions now contracts with and monitors state licensed community halfway houses that supervise TRC cases.

*****New release type that is a subgroup of the post-release control group
